Demographics Matter: The Global Challenge of an Ageing Population

Giovanni Lamura (/it/bio/giovanni-lamura) | Alessandro Rosina (/it/bio/alessandro-rosina)

12 gennaio 2023

Ageing population is a trend increasingly shared by many countries in the world: not only advanced, but also emerging economies. As younger cohorts shrink while **the elderly represent a larger share of the population**, governments have to deal urgently with issues regarding **the future of their welfare systems**. How to preserve sound public finances in a context of **increasing demand for pensions, health and long-term care**? What policies would be needed to promote and support active ageing? Are current models of welfare provision still appropriate to face **major changes in States' demographic structures**?
